IN THE CLAIMS:

The pending claims are set forth below and have been amended and/or cancelled, without prejudice, where noted:

- 1-9. (Canceled)
- 10. (Previously Presented) A method for preparing a supported catalyst component for the production of hollow beads of polyethylene comprising:
- (a) providing porous functionalized beads of polystyrene characterized by the formula:

wherein: A is a substituted or unsubstituted alkyl group having from 2 to 18 carbon atoms providing a flexible arm;

- (b) dissolving an iron-based complex characterized by formula I in a solvent: wherein: R is an alkyl group having from 1 to 20 carbon atoms; R' and R" are the same or different and are each a substituted or unsubstituted alkyl group having from 1 to 20 carbon atoms, an unsubstituted aryl group or a substituted aryl group having substituents having from 1 to 20 carbon atoms;
- (c) saturating the bead of subparagraph (a) with the solution of subparagraph (b);
 - (d) thereafter evaporating the solvent; and
 - (e) retrieving dry beads of the supported catalyst component.
- 11. (Previously Presented) The method of claim 10 wherein R is an alkyl group having from 1 to 4 carbon atoms.
- 12. (Previously Presented) The method of claim 11 wherein R is a methyl group.
- 13. (Previously Presented) The method of claim 10 wherein R' and R" are the same and are substituted or unsubstituted phenyl groups.
- 14. (Previously Presented) The method of claim 13 wherein R' and R" are

substituted phenyl groups in which the substituents are isopropyl groups in positions 2 and 6.

- 15. (Previously Presented) The method of claim 13 wherein R' and R" are substituted phenyl groups in which the substituents are methyl groups in positions 2, 4 and 6.
- 16. (Previously Presented) The method of claim 13 wherein R' and R" are unsubstituted phenyl groups.
- 17. (Withdrawn) A supported catalyst component produced by the process of:
- (a) providing porous functionalized beads of polystyrene characterized by the formula: wherein: A is a substituted or unsubstituted alkyl group having from 2 to 18 carbon atoms providing a flexible arm;
- (b) dissolving an iron-based complex characterized by formula I in a solvent: wherein: R is an alkyl group having from 1 to 20 carbon atoms; R' and R" are the same or different and are each a substituted or unsubstituted alkyl group having from 1 to 20 carbon atoms, an unsubstituted aryl group or a substituted aryl group having substituents having from 1 to 20 carbon atoms;
- (c) saturating the bead of subparagraph (a) with the solution of subparagraph (b);
 - (d) thereafter evaporating the solvent; and
 - (e) retrieving dry beads of the supported catalyst component.
- 18. (Withdrawn) A supported catalyst system comprising the supported catalyst component of claim 20 and an activating agent.
- 19. (Withdrawn) The supported catalyst system of claim 18 wherein said activating agent is an alumoxane.

- 20. (Withdrawn) The supported catalyst system of claim 18 wherein said activating agent is an aluminum alkyl.
- 21. (Withdrawn) The supported catalyst system of claim 20 wherein said aluminum alkyl is diethyl aluminum chloride.
- 22. (Withdrawn) A method for preparing hollow beads of polyethylene comprising:
- (a) providing a supported catalyst component having a support comprising porous functionalized beads of polystyrene and a catalyst component impregnated on the support and comprising an iron-based complex of the formula;
 - (b) activating the supported catalyst component with an activating agent;
- (c) feeding an ethylene monomer to a reaction zone containing said activated supported catalyst component;
- (d) maintaining said reaction zone under polymerization conditions to polymerize said ethylene monomer; and
 - (e) retrieving hollow beads of polyethylene from said reaction zone.
- 23. (Withdrawn) The supported catalyst system of claim 22 wherein said activating agent is an alumoxane.
- 24. (Withdrawn) The supported catalyst system of claim 22 wherein said activating agent is an aluminum alkyl.
- 25. The supported catalyst system of claim 24 wherein said aluminum alkyl is diethyl aluminum chloride.
